EDUCATION

2004 BA Hons in Creative
Visualisation, University of
Teesside

PROFILE

Front-end developer and 3D designer with over two decades of web experience and a long-standing background in games and real-time graphics. I specialise in building interactive 3D animated experiences in the browser. I also produce cinematic 3D animations for use in marketing and advertising.

With over 20 years of experience working web and 3D, I have delivered a wide range of projects, for small and large corporate clients. I enjoy pushing myself to achieve the best possible results for my clients in as fast a time as possible. I am always looking for creative simple solutions to complex problems and I always enjoy the buzz of producing high quality work that wow's my clients and achieves the desired results.

HIGHLIGHTS

- Combines front-end engineering (React, TypeScript, Three.js) with a strong eye for composition, lighting and motion.
- Comfortable working from sketch to prototype to polished, production-ready UI.
- Experienced turning complex data into clear, understandable visualisations.
- Background across games, VR/AR, and real-world data visualisation, bringing gameplay-level polish to business interfaces.

EMPLOYMENT HISTORY

Freelance – 3D Specialist

2011 – 2016 & 2024 – Present

- Produced 3D renders of the M-Sport Raptor Dakar Rally car for use in marketing materials.
- Worked on Combat Air Patrol 2 flight simulator. Modelling cockpits, Aircraft and various supporting assets.
- Helped build 3d interior design editor in three.js, including tiling editor
- Implemented webRTC feed from browser to Blender in realtime, for high quality realtime rendering in the browser.
- Created VR and AR experiences, including a driving simulator highlighting the dangers of drink driving and interactive medical visualisations.
- Built 'Ocean Depths', a first person submarine journey for an exhibition, focusing on atmosphere, lighting and immersion.
- Modelled detailed environments and hero assets such as the Queens University building in Belfast and aircraft for a flight simulator.

INTERESTS AND ACHIEVEMENTS

- Worked on the award winning, M-Sport Raptor Dakar Rally web experience
- Created and released Xbox Live Indie Game, Avatar Euro Penalty Shootout with a friend , which achieved number 1 sports game and number 8 overall chart position in the UK
- I regularly attend events and networking meetups related to web development, 3D and the creative sector.
- Always keen to learn and keep my knowledge and keep up to date by attending industry related conferences such as unity.com/events/unite and www.middlesbroughfe.co.uk
- Co Developed a Kinect training simulation for NATO and demonstrated it in Rome at the annual ITEC conference www.itec.co.uk
- Achieved a top 60,000 website ranking on alexa with www.g-unleashed.com
- I love to keep fit by cycling and walking
- Avid Follower of TEDTalks andt Tech blogs such as Geek.com, and TheVerge.com
- Love Motorsport and Formula 1

- Designed and built a browser-based realtime 3D terrain visualiser (TypeScript, Three.js, WebGL) for analysing underwater elevation data.
- Turned complex geospatial and time-series data into clear interactive views, colour systems, and cross-sections that non-technical users could understand.
- Improved core analysis workflows by reducing volumetric calculations from around 30 seconds to 0.1 seconds using GPU-accelerated techniques.
- Developed methods to compare changes in elevation over time, blending datasets in realtime to tell clear visual stories.
- Collaborated with ports and maritime clients to design simple, high-impact visual systems that support everyday decision making.
- Delivered a realtime 3D flythrough of the Forth estuary showcased at COP26, combining cinematic camera work with live data overlays.
- Worked across AWS (EC2, S3) and the wider web stack to ensure visuals were performant, reliable and easy to access in the browser.

- Created environments, characters and animations for educational and training games used by schools, the military and professional sectors.
- Collaborated with programmers on character rigs, lighting and tools that improved both visual quality and performance.
- Helped introduce lightmapping and custom 3ds Max tooling to speed up production and keep visuals consistent across large projects.
- Worked on projects for high profile clients including Siemens, IBM, Fiat, Unilever and PWC.

- Designed and built popular Grand Theft Auto fan websites, combining UI design, branding and front-end development.
- Grew the sites to a top 50,000 Alexa ranking and achieved number 1 search ranking for “GTA Vice City hidden packages guide” on Google.
